## **Job Title : *Software Engineer***

### **Company Overview**

Openmynz is a technology solutions and services company incorporated in 2022, primarily focusing on Video and Broadband technologies for Network Infrastructure and Consumer Premise Equipments. Actively involved in developing and customizing Next Generation Media Access Platform, Distributed Access Architecture (DAA) based Edge Routing products and Cloud Applications and Solutions for various global customers. The Leadership team is actively pursuing its vision of investing and leveraging advancements made in Artificial Intelligence and Data Analytics based solutions to enhance the partnership value for Multi Service Operators and end consumers. Openmynz also actively participates in engaging with its customers in Network Design solutions for its green field opportunities and network upgradation for next gen deployments. The Corporate Leadership strongly believes in creating positive and notable value differentiation for its global customers and partners, by leveraging their vast experience of working for large Product companies including Motorola, HP, ARRIS over the last 30 years in the said domain technologies and in leading Captive Centres.

### **General Summary**

We are looking for fresh engineering graduates of Computer Science or Electronics and Communication streams who can engage with the team in the product development in Broadband and WiFi technologies. This is a very niche area in developing the Broadband devices and WiFi Management Solutions and would have the opportunity in working with a world-class team working on the latest technology and futuristic products. The incumbent can have 0-3 years of overall industry experience. Strong technical skills on C++ and Linux is required along with strong analytical and problem solving skills.

### **Duties and Responsibilities**

- Ability to develop and test embedded software solutions
- Ability to work as individual contributor and flexibility to work on different areas and working with the team

- Flexibility in switching roles to accomplish timelines by taking up multiple responsibilities
- Excellent analytical and problem solving skills along with a yearning to learn

### **Skills Required**

- Bachelors Engineering degree in Computer Science or Electronics (ECE) as main stream
- Very good knowledge in C Programming, Operating System fundamentals and Data Structures
- No prior software development experience required. *Should have hands-on experience in developing software as part of college curriculum projects and internships*
- **Excellent C++ programming skills and object-oriented design skills**
- **Knowledge and experience of Linux and Embedded systems**
- **Excellent Analytical and Problem solving skills**
- Ability to provide programming solution to problems
- Ability to work in a team, flexible, attitude to learn and implement new solutions
- Thorough in Software development fundamentals and process
